

Botox vs Xeomin

Results: Both Botox and Xeomin reduce wrinkles by relaxing muscles, but Botox may provide a slightly faster and more noticeable effect due to the additional proteins it contains. Xeomin, being purer (without these proteins), may offer a smoother, more subtle result with a more natural feel.

Longevity: Botox typically lasts 3-4 months, though results can fade sooner for some. Xeomin works similarly, but for some people, it may have a slightly shorter duration, depending on individual response.

RHA vs Juvederm

RHA Filler: Known for its flexibility and natural feel, RHA adapts well to facial movement, providing longer-lasting results (12-18 months) in dynamic areas like smile lines.

Juvederm Filler: Offers smooth, volumizing effects, with a focus on areas like cheeks and lips. Results typically last 6-12 months, depending on the product and area treated.
